**Equipment under test (EUT)**

Model: WF111-A, WF111-E, WF121-A, WF121-E, WGM110A, WGM110E  
Trade Mark: Silicon Labs / Bluegiga  
Serial: -

**General description**

The equipment under test is a WiFi module. Model specific information is provided in the table below:

Model:	Description:	Rated RF Output power:	Receiver Category:
WF111-A, WF111-E	IEEE 802.11 b/g/n radio	+16 dBm	1
WF121-A, WF121-E	IEEE 802.11 b/g/n radio	+16 dBm	1
WGM110A, WGM110E	IEEE 802.11 b/g/n radio	+16 dBm	1

**Modifications incorporated in the EUT**

No modifications were made.

**Specifications of the EUT**

Highest antenna gain: 2.14 dBi (declared by the manufacturer)  
EUT dimensions: Smaller than 40 x 40 x 40 mm

**Power requirements**

Type: Supplied by the end product  
Rated voltage: Tested with 3.3 V  
Rated current: -  
Rated frequency: DC

**Equipment category and characteristics**

Operating Frequency Range (OFR): 2412 - 2472 MHz  
Channels: 13  
Channel separation: 5 MHz  
Channel bandwidth: 20 MHz  
Transmission technique: DSSS  
Modulation: CCK, QPSK, OFDM  
Geo-location capability: -

**Peripherals**

Test PC  
Evaluation board  
WiFi router

## Test conditions

The EUT was set into continuous transmit/receive mode to certain channel during the measurements.

Receiver blocking test was performed using two samples. One was set to continuously transmit and other one was set to receive continuously.

Performance of the receiver was monitored with software provided by the manufacturer which calculated error rate of the established connection.

Tests were performed only to variants with external antenna connector when such a variant existed for a particular model, given the external antenna's higher gain that had to be calculated and added to the actual test levels.

Adapter with short RF cable was used between the EUT and test installation.

Tests were performed in following WiFi modes:

WF111, b-mode  
WF121, g-mode  
WGM110, g-mode

Test setup of the WF121 and WGM110 did not allow using the slowest data rate setting so tests were performed while in g-mode.

**Table 1:** The test frequencies used in the tests

Frequency [MHz]:	Channel:
2412	Low
2437	Middle
2462	High

Channel 13 was not available with the monitoring software so channel 11 was used as channel high.

## Receiver Blocking

**Standard:** EN 300 328 V.2.1.1  
**Tested by:** EHA  
**Date:** 3-5 April 2017  
**Temperature:** 22 - 23 °C  
**Humidity:** 22 - 26 %

**Test result:** **PASS**

### Test plan

Measurements are performed according to ETSI EN 300 328 V2.1.1 clause 5.4.11.2.1

Minimum performance criteria:

Error rate of the connection shall be less than or equal to 10 % as declared by the manufacturer.

### Test results
